

Conley Casting Supply Corp.

RING-MOLD™ CASTING SYSTEM

Ring-Mold casting machine is set up to cast one two or three molds at one time.
For metal the operator would use a silicone rubber beehive single, double or triple.
For wax the operator would use the elevator system, which is adjusted for each level by hand.

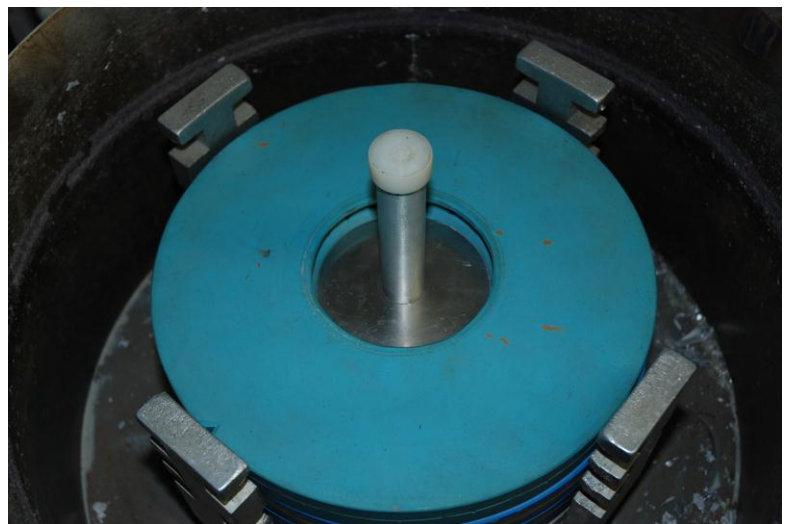

Center plug for the ring-mold making of 9" and 12" standard disc molds.

Machine with ready for ring-molds with distribution system inserted.

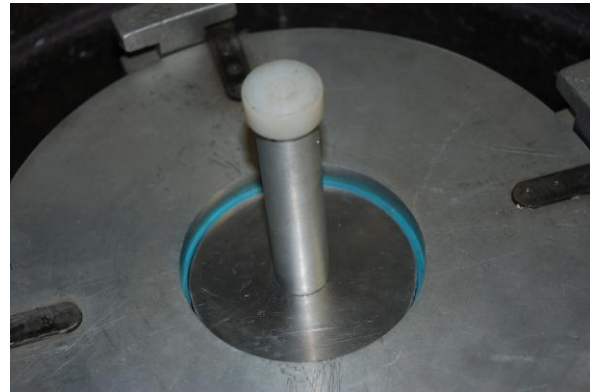

Machine with 3 12" ring-molds and distribution system installed ready for the cover plate.

Conley Casting Supply Corp.

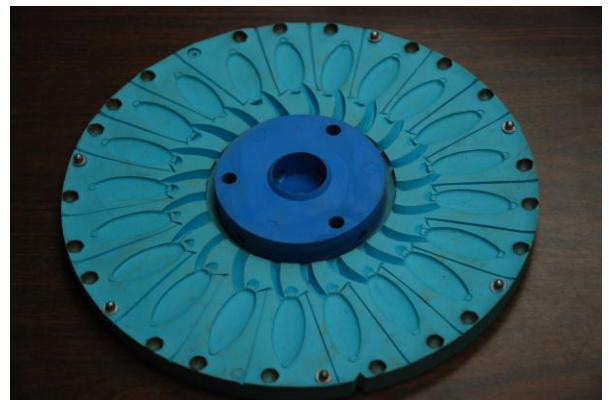

Machine with ring-molds, distribution system, and ring-mold cover plate installed ready for wax or plastic.

Machine after ring- molds are cast and distribution system removed. Machine may spin to allow cast material to congeal.

Typical ring-mold for fishing tackle with a single beehive inserted.

Vent attachment can be use to blow cooling for wax or exhaust for plastic.
